

## ADA & CE Compliant VoIP Emergency Phones now with Multicast Paging

The **1600-IP Series** of ADA Compliant VoIP Emergency Phones are designed to provide quick and reliable handsfree communication for SIP VoIP phone systems with PoE and also allows for standard paging via multicast. All **1600-IP Series** phones meet ADA requirements for elevator or emergency telephones, and can be programmed from any touch tone phone or PC on the same LAN or remotely using a static IP address. The phones can dial up to 5 programmable emergency numbers. In addition, the **E-1600-20-IP**, **E-1600-22-IP**, **E-1600-52-IP** and **E-1600-TP2IPEWP** feature a second "INFO" button that will dial up to 5 non-emergency numbers. Two amp relay contacts are provided for strobe light, camera, door/gate control, etc.

The **1600-IP Series** phones can be programmed to automatically deliver a digital announcement to identify the location of the emergency call. Alternatively, a DTMF touch tone code may also be delivered. A "Call Connected" LED can be initiated manually or automatically. All programming parameters, including phone numbers and location numbers, are stored in non-volatile memory. All units are PoE powered.

For outdoor installations where the unit is exposed to precipitation or condensation, select **1600-IP Series** phones are available with Enhanced Weather Protection (**EWP**). EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**⚠ Installation requires a Network Administrator / IT Technician**

### Features

- Automatic polling and programming software included
- 2 Amp relay contacts for door/gate or **SL-2** strobe light control
- SIP compliant (see page 2 for more information)
- ASME A17.1 code compliant when used with the Model **LV-1K** Line Verification Panel
- Outbound Proxy, Authentication ID, Peer to Peer, VLAN Tagging
- PoE powered (class 1, <4 Watts)
- **Paging prioritization**
- **SIP endpoint or multicast group member**
- **Compatible with Polycom multicast paging**
- **SIP/Multicast: SIP page, SIP page and zoned multicast receive**
- VoIP eliminates the need for "Push to Talk" mode
- Network downloadable firmware
- Meets ADA requirements for Emergency Phones:
  - Automatically lights the Red "Call Connected" LED
  - Transmits a unique location I.D. code or voice announcement
  - Grade 2 Braille label for the visually impaired
- Non-volatile digital voice announcer with 28 seconds of voice memory
- Marine grade 316 stainless steel prevents corrosion on the stainless steel models
- Laser etched graphics on stainless steel models
- Dials up to 5 emergency numbers
- **E-1600-20-IP**, **E-1600-22-IP**, **E-1600-52-IP**, and **E-1600-TP2IPEWP** dial up to 5 non-emergency "INFO" numbers
- Optional Enhanced Weather Protection (EWP), EWP products are designed to meet IP66 Ingress Protection Rating, go to: [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)
- Hangs up on busy signal, time-out or touch tone command
- Extended temperature range (-40°F to 140°F)
- Available in 42" tower phone model **E-1600-BLTIPPEWP**
- Optional **LV-1K** Line verification Panel
- Optional **PB-100** Polling System available
- Optional **SL-2** or **BLK-4-EWP** strobe light kit available
- Optional **E-1600A-MK-GNP** Pedestal Mounting Kit
- Optional **PB-1** Panic Button Kit

### Applications

- Elevators
- Parking ramps/lots
- Emergency pool phones
- ATM machines
- Medical centers
- Silent hold-up alarm dialer with an optional **PB-1** Panic Button Kit
- Area of refuge locations
- Lobbies
- Entryways
- Campus emergency stations
- Stadiums
- Convention centers
- Public access areas

*\* Americans with Disabilities Act of 1992 contains federal regulations regarding elevator telephones (Public Law 101-336).*

**[www.VikingElectronics.com](http://www.VikingElectronics.com)**

### Specifications

**Power:** PoE class 1 (<4 Watts)  
**Maximum Sound Pressure:** 95 dB SPL @ 1m  
**Dimensions:** See Installation and Specifications  
**Operating Temperature:** -40°F to 140°F (-40° C to 60° C)  
**Humidity - Standard Products:** 5% to 95% non-condensing  
**Humidity - EWP Products:** Up to 100%  
**Audio Codecs:** G711u, G711a, G722  
**Network Compliance:** IEEE 802.3 af PoE, SIP 2.0 RFC3261, 100BASE-TX with auto cross over  
**Regulatory Compliance:** CE, FCC Part 15 and Canada ICES-003 Class A  
**Connections:** (1) RJ45 10/100 Base-T, (3) gel-filled butt connectors

## VoIP SIP System Compatibility

For compatibility and vendor specific detailed configuration instructions, see the **Viking VoIP SIP System Compatibility List**, DOD 944. To open and download this PDF file:

Scan the QR code below to open and download the **Viking VoIP SIP System Compatibility List**

- OR -

1. Go to **www.vikingelectronics.com** and enter **944** in the search box
2. Click **Application Note (DOD 944)** to open and download the PDF

***Important:*** *Exclusion from this list means only that compatibility has not been verified, it does not mean incompatibility. If you have questions, please call Viking Electronics at 715-386-8861.*

## Definitions

**Client:** A computer or device that makes use of a server. As an example, the client might request a particular file from the server.

**DHCP:** Dynamic Host Configuration Protocol. In this procedure the network server or router takes note of a client's MAC address and assigns an IP address to allow the client to communicate with other devices on the network.

**DNS Server:** A DNS (Domain Name System) server translates domain names (ie: [www.vikingelectronics.com](http://www.vikingelectronics.com)) into an IP address.

**Ethernet:** Ethernet is the most commonly used LAN technology. An Ethernet Local Area Network typically uses twisted pair wires to achieve transmission speeds up to 1Gbps.

**Host:** A computer or device connected to a network.

**Host Name:** A host name is a label assigned to a device connected to a computer network that is used to identify the device in various forms of network communication.

**Hosts File:** A file stored in a computer that lists host names and their corresponding IP addresses with the purpose of mapping addresses to hosts or vice versa.

**Internet:** A worldwide system of computer networks running on IP protocol which can be accessed by individual computers or networks.

**IP:** Internet Protocol is the set of communications conventions that govern the way computers communicate on networks and on the Internet.

**IP Address:** This is the address that uniquely identifies a host on a network.

**LAN:** Local Area Network. A LAN is a network connecting computers and other devices within an office or building.

**Lease:** The amount of time a DHCP server reserves an address it has assigned. If the address isn't used by the host for a period of time, the lease can expire and the address can be assigned to another host.

**MAC Address:** MAC stands for Media Access Control. A MAC address, also called a hardware address or physical address, is a unique address assigned to a device at the factory. It resides in the device's memory and is used by routers to send network traffic to the correct IP address. You can find the MAC address of your **1600-IP Series** phone printed on a white label on the top surface of the PoE LAN port.

**Router:** A device that forwards data from one network to another. In order to send information to the right location, routers look at IP Address, MAC Address and Subnet Mask.

**RTP:** Real-Time Transport Protocol is an Internet protocol standard that specifies a way for programs to manage the real-time transmission of multimedia data over either unicast or multicast network services.

**Server:** A computer or device that fulfills requests from a client. This could involve the server sending a particular file requested by the client.

**Session Initiation Protocol (SIP):** Is a signaling communications protocol, widely used for controlling multimedia communication sessions such as voice and video calls over Internet Protocol (IP) networks. The protocol defines the messages that are sent between endpoints, which govern establishment, termination and other essential elements of a call.

**Static IP Address:** A static IP Address has been assigned manually and is permanent until it is manually removed. It is not subject to the Lease limitations of a Dynamic IP Address assigned by the DHCP Server. The **1600-IP Series** has DHCP enabled by default. If it is not able to obtain an IP address from the network server or router, it falls back to a last known IP address. If the network settings in the **1600-IP Series** are reset using the call switch (See Section F on page 25) and the **1600-IP Series** is not able to obtain an IP address from the network server or router, the **1600-IP Series** forgets the last known IP address and falls back to a default static IP address of: **192.168.154.1**

**Subnet:** A portion of a network that shares a common address component. On TCP/IP networks, subnets are defined as all devices whose IP addresses have the same prefix. For example, all devices with IP addresses that start with 100.100.100. would be part of the same subnet. Dividing a network into subnets is useful for both security and performance reasons. IP networks are divided using a subnet mask.

**TCP/IP:** Transmission Control Protocol/Internet Protocol is the suite of communications protocols used to connect hosts on the Internet. TCP/IP uses several protocols, the two main ones being TCP and IP. TCP/IP is built into the UNIX operating system and is used by the Internet, making it the de facto standard for transmitting data over networks.

**TISP:** Telephone Internet Service Provider

**WAN:** Wide Area Network. A WAN is a network comprising a large geographical area like a state or country. The largest WAN is the Internet.

## Overview of Chassis and Mounting Options

**Note:** When European CE compliance is required, mount open board models within a metal enclosure.

**Model: E-1600-1P**  
**HxWxD:** 5.25 x 4.0 x 2.0  
**Mounting:** Surface mount  
**Description:** 16 gauge steel with textured red powder paint

**Model: E-1600-20-IP**  
**HxWxD:** 5.0 x 5.0 x 2.25  
**Mounting:** Flush mount with included rough-in box (will not fit in a double gang box), or surface mount with a **VE-5x5**  
**Description:** Two button, 14 gauge marine grade 316 stainless steel with #4 brushed finish, T-10 Torx Security Screws

**Model: E-1600-45-IP**  
**HxWxD:** 5.25 x 4.0 x 2.0  
**Mounting:** Surface mount  
**Description:** 16 gauge steel with textured yellow powder paint

**Model: E-1600-22-IP**  
**HxWxD:** 5.0 x 5.0 x 2.25  
**Mounting:** Flush mount in a standard double gang electrical box or surface mount with a **VE-5x5**  
**Description:** Two button, 14 gauge marine grade 316 stainless steel with #4 brushed finish, T-10 Torx Security Screws

**Model: E-1600-60-IP**  
**HxWxD:** 5.25 x 4.0 x 2.0  
**Mounting:** Surface mount  
**Description:** 16 gauge steel with textured blue powder paint and "POLICE" verbiage

**Model: E-1600-30-IP**  
**HxWxD:** 5.0 x 5.0 x 2.25  
**Mounting:** Flush mount with included rough-in box (will not fit in a double gang box), or surface mount with a **VE-5x5**  
**Description:** 14 gauge marine grade 316 stainless steel with #4 brushed finish, T-10 Torx Security Screws

**Model: E-1600-65-IP**  
**HxWxD:** 5.25 x 4.0 x 2.0  
**Mounting:** Surface mount  
**Description:** 16 gauge steel with textured blue powder paint

**Model: E-1600-32-IP**  
**HxWxD:** 5.0 x 5.0 x 2.25  
**Mounting:** Flush mount in a standard double gang electrical box or surface mount with a **VE-5x5**  
**Description:** 14 gauge marine grade 316 stainless steel with #4 brushed finish, T-10 Torx Security Screws

**Model: E-1600-03-IP**  
**HxWxD:** 7.22 x 5.36 x 1.55  
**Mounting:** Surface mount  
**Description:** 14 gauge marine grade 316 stainless steel with #4 brushed finish

**Model: E-1600-50-IP**  
**Description:** Single button 1600-IP parts kit without chassis

**Model: E-1600-52-IP**  
**Description:** Two button 1600-IP parts kit without chassis

**Model: E-1600-02-IP**  
**HxWxD:** 13.0 x 10.5 x 2.0  
**Mounting:** Flush mount  
**Description:** 14 gauge marine grade 316 stainless steel with #4 brushed finish

**Model: E-1600-55-IP**  
**HxWxD:** 5.0 x 5.0 x 2.0  
**Description:** Universal emergency phone kit to install behind elevator panels or when a custom panel is used

## Overview of Chassis and Mounting Options

**Note:** When European CE compliance is required, mount open board models within a metal enclosure.

**Model: E-1600-BK-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 304 stainless steel with fine textured black powder paint

**Model: E-1600-RD-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 304 stainless steel with fine textured red powder paint

**Model: E-1600-BL-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 304 stainless steel with fine textured blue powder paint

**Model: E-1600-SS-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 316 marine grade stainless steel with a #4 brushed finish

**Model: E-1600-BLP-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 304 stainless steel with fine textured blue powder paint and "POLICE" verbiage

**Model: E-1600-YL-IP**  
**HxWxD:** 5.75 x 3.08 x 1.05  
**Mounting:** Surface mount  
**Description:** 16 gauge 304 stainless steel with fine textured yellow powder paint

**Model: E-1600-GT-IPEWP**  
**HxWxD:** 12.0 x 10.0 x 2.0  
**Mounting:** Flush mount  
**Description:** Direct physical replacement for GAI-TRONICS Red Alert Model 397-700

**Model: E-1600-TP-IPEWP**  
**HxWxD:** 11.75 x 9.5 x 2.0  
**Mounting:** Flush mount  
**Description:** Direct physical replacement for Talk-A-Phone models ETP-400V or VoIP-500

**Model: E-1600-TP2IPEWP**  
**HxWxD:** 11.75 x 9.5 x 2.0  
**Mounting:** Flush mount  
**Description:** Direct physical replacement for Talk-A-Phone models ETP-400DV or VoIP-500D

**Model: E-1600-RT-IPEWP**  
**HxWxD:** 11.938 x 8.281 x 2.0  
**Mounting:** Flush mount  
**Description:** Flush Mount to RAMTEL PLC MINI Columns, towers, wall mounts, 926 and 906 boxes and pedestals

**Model: E-1600-RTMIPEWP**  
**HxWxD:** 8.5 x 6.5 x 2.0  
**Mounting:** Flush mount  
**Description:** Flush Mount to RAMTEL MINI Columns, towers, wall mounts, 924 and 904 boxes and pedestals

**Model: E-1600-912-IP(EWP)**  
**HxWxD:** 11.225 x 67.08 x 2.0  
**Mounting:** Mounts in Viking Model VE-9X12 Series Outdoor Enclosures  
**Description:** 14 gauge marine grade 316 stainless steel with #4 brushed finish

# Features Overview

## Rear (PCB) View of E-1600-IP Series Emergency Phone

**PoE LAN Port 10/100, PoE Class 1 (<4 Watts):** Connect to your LAN via RJ45 plug and CAT5 or greater twisted pair wire.

**MAC Address Label:** The MAC address is a unique 12 digit number used by routers to send network traffic to the correct IP address.

**Yellow Network Status LED:** Lights steady to indicate power and data link. Blinks to indicate network activity.

**Green Unit Status LED**

Connect to Optional Strobe Light, LV-1K, etc.

**Note:** The gel-filled (water-tight) butt connectors are designed for insulation displacement on 19-26 gauge wire with a maximum insulation of 0.082 inches. Cut off stripped wire ends before terminating.

## Installation and Specifications

The following sections show specifications and installation instructions for the different chassis in the 1600-IP Series.

**⚠ IMPORTANT:** Electronic devices are susceptible to lightning and power station electrical surges from both the AC outlet and the telephone line. It is recommended that a surge protector be installed to protect against such surges.

### E-1600-IP / E-1600-45-IP / E-1600-60-IP / E-1600-65-IP

**Dimensions:** 5.25" x 4.0" x 2.0" (133 mm x 102 mm x 51 mm)

**Shipping Weight:** 2.5 lbs (1.13 kg)

**Material:** 16 gauge steel

**Finish:** E-1600-IP: Red powder paint

E-1600-45-IP: Yellow powder paint

E-1600-60-IP: Blue powder paint with "POLICE" verbiage

E-1600-65-IP: Blue powder paint

**Connections:** Gel-filled butt connectors

**Mounting:** Surface mount to walls, posts, single gang boxes or 4" x 4" electrical junction boxes or recess mount in elevator phone boxes. Attach mounting plate in desired location. Attach wires then fasten cover to mounting plate with set screw.

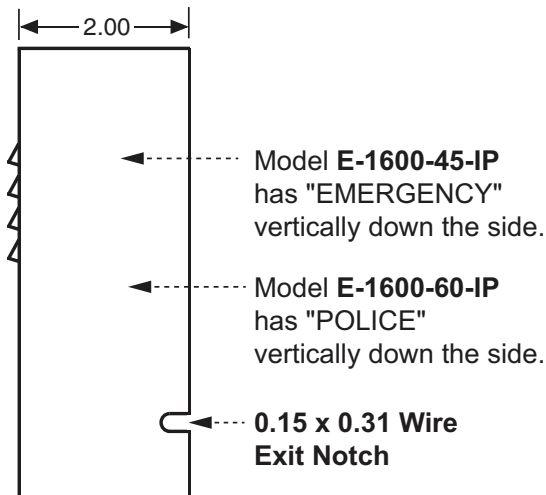

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** For greater weather resistance, apply a bead of clear silicon caulking around the top edge and sides of the chassis.

**Optional Gooseneck Pedestal Mounting Kit:** The E-1600A-MK-GNP Mounting Kit allows you to mount the E-1600A, E-1600-40A, E-1600-45A, E-1600-60A or E-1600-65A to any Viking Gooseneck Pedestal.

# E-1600-SS-IP / E-1600-RD-IP / E-1600-YL-IP / E-1600-BL-IP / E-1600-BLP-IP / E-1600-BK-IP

**Dimensions:** 5.75" x 3.08" x 1.05" (146 mm x 78 mm x 27 mm)

**Shipping Weight:** 2.5 lbs (1.3 kg)

**Material / Finish E-1600-SS-IP only:** 16 gauge marine grade 316 stainless steel with a #4 brushed finish

**Material:** 16 gauge 304 stainless steel

**Finish:** E-1600-RD-IP: Red fine texture powder paint

E-1600-YL-IP: Yellow fine texture powder paint

E-1600-BL-IP: Blue fine texture powder paint

E-1600-BLP-IP: Blue fine texture powder paint with "POLICE" verbiage

E-1600-BK-IP: Black fine texture powder paint

**Connections:** Gel-filled butt connectors

**Mounting:** Surface mount to walls, posts or single gang electrical boxes. Attach the mounting plate in desired location and connect the wires. Then, secure the phone to the mounting plate with provided 8-32 set screws.

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP: [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** For greater weather resistance, apply a bead of clear silicon caulking around the top edge and sides of the chassis.

## E-1600-02-IP

**Dimensions:** 13" x 10.5" x 2" (330mm x 267mm x 51mm)

**Shipping Weight:** 7 lbs (3.18 kg)

**Connections:** Gel-filled butt connectors

**Material:** 14 gauge brushed stainless steel

**Mounting:** Flush mount in elevator cabs, ATMs, stairwells, hallways, etc.

**Suggested Hardware:** (6) #8 x 3/4 flat head phillips sheet metal type A screws (not included)

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP: [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When mounting outside to rough or uneven surfaces (brick, stucco, etc.) apply a bead of clear silicone caulking around the top edge and sides of faceplate.

**Note:** When European CE compliance is required, mount onto a metal enclosure.

(6) 0.188 diameter countersunk holes

FRONT VIEW

SIDE VIEW

**Dimensions:** 7.22" x 5.36" x 1.55" (183mm x 149mm x 39mm)

**Material:** 14 gauge vandal resistant Marine grade 316 brushed stainless steel panel

**Shipping Weight:** 3.0 lbs (1.36 kg)

**Connections:** Gel-filled butt connectors

**Mounting:** Surface mount to walls, posts, single gang boxes, double gang boxes or 4" x 4" electrical junction boxes or recess mount in elevator phone boxes. Attach mounting plate in desired location. Attach wires then fasten cover to mounting plate with set screw.

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP: [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** For greater weather resistance, apply a bead of clear silicon caulking around the top edge and sides of the chassis.

**Dimensions:** Overall: 5.0" x 5.0" x 2.25" (127mm x 127 x 57mm), Plastic Electrical Box: 4.0" x 4.0" x 2.14" (102mm x 102mm x 54mm)

**Shipping Weight:** 2.12 lbs (1.0 kg)

**Front Panel Material:** 14 gauge Marine grade 316 brushed stainless steel

**Connections:** Gel-filled butt connectors

**Mounting with Plastic Rough-In Box (included):** Flush into walls, mounts to side of wall stud.

**Mounting with Optional VE-5x5:** Surface mount to walls, single gang boxes, double gang boxes, posts, or to a Viking **VE-GNP** Gooseneck pedestal.

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When mounting outside to rough or uneven surfaces (brick, stucco, etc.) apply a bead of clear silicone caulking around the top edge / sides of faceplate or **VE-5x5**.

**Note:** When European CE compliance is required, mount in optional **VE-5X5** metal enclosure.

**Optional VE-5x5 Surface Mount Box with black satin powder paint finish, not included. Optional VE-LIGHT kit can be used to illuminate the faceplate when used with a VE-5x5. WARNING: Do NOT use a wet location box.**

**Important:** The **E-1600-20-IP** will **NOT** mount to a standard double gang box. If your applications requires a double gang box, see model **E-1600A-22-IP**.

**\* Note:** The black plastic rough-in box (part # 259576) may be purchased separately (Example: Mounting boxes to studs before the walls are finished for flush installation). Go to [www.vikingelectronics.com](http://www.vikingelectronics.com) and click on "Spare Parts" to order these rough-in boxes.

**\*\* Caution:** When warm air comes in contact with cold surfaces, such as outside walls and conduits, it causes condensation. To prevent condensation from accumulating inside the **E-1600-20-IP** always bring conduit into the bottom of the unit. If this is not possible, drill a 1/4" diameter hole in the bottom of the black plastic box.

## E-1600-22-IP

**Dimensions:** 5.0" x 5.0" x 2.25" (127mm x 127 x 57mm)

**Shipping Weight:** 2.12 lbs (1.0 lbs)

**Front Panel Material:** 14 gauge marine grade 316 brushed stainless steel

**Connections:** Gel-filled butt connectors

**Info Button:** Dials up to 5 non-emergency phone numbers

**Mounting in a Double Gang Rough-In Box (not included):**  
Flush into walls, mounts to side of wall studs, etc.

**Note:** For surface mount installations, use model **E-1600-20-IP** with **VE-5x5** surface mount box.

**Optional Enhanced Weather Protection (EWP) Available:**  
EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When mounting outside to rough or uneven surfaces (brick, stucco, etc.) apply a bead of clear silicone caulking around the top edge and sides of faceplate.

**Note:** When European CE compliance is required, mount as shown, in a metal enclosure.

\* **CAUTION:** Excessive wire length and/or using a rough-in box with inadequate depth can apply force to the circuit board causing physical damage.

**Important:** When warm air comes in contact with cold surfaces, such as outside walls and conduits, it causes condensation. To prevent condensation from accumulating inside the **E-1600-22-IP** always bring conduit into the bottom of the unit. If this is not possible, drill a 1/4" diameter hole in the bottom of the double gang box.

## E-1600-32-IP

**Dimensions:** 5.0" x 5.0" x 2.25" (127mm x 127 x 57mm)

**Shipping Weight:** 2.12 lbs (1.0 kg)

**Front Panel Material:** 14 gauge marine grade 316 brushed stainless steel

**Connections:** Gel-filled butt connectors

**Mounting in a Double Gang Rough-In Box (not included):**  
Flush into walls, mounts to side of wall studs, etc.

**Note:** For surface mount installations, use Model **E-1600-30-IP** with **VE-5x5** surface mount box.

**Optional Enhanced Weather Protection (EWP) Available:**  
EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When mounting outside to rough or uneven surfaces (brick, stucco, etc.) apply a bead of clear silicone caulking around the top edge and sides of faceplate.

**Note:** When European CE compliance is required, mount as shown, in a metal enclosure.

\* **CAUTION:** Excessive wire length and/or using a rough-in box with inadequate depth can apply force to the circuit board causing physical damage.

**Important:** When warm air comes in contact with cold surfaces, such as outside walls and conduits, it causes condensation. To prevent condensation from accumulating inside the **E-1600-32-IP** always bring conduit into the bottom of the unit. If this is not possible, drill a 1/4" diameter hole in the bottom of the double gang box.

# E-1600-30-IP

**Dimensions:** Overall - 5.0" x 5.0" x 2.25" (127mm x 127 x 57mm),  
Plastic Electrical Box - 4.0" x 4.0" x 2.14" (102mm x 102mm x 54mm)

**Shipping Weight:** 2.12 lbs (1.0 kg)

**Front Panel Material:** 14 gauge marine grade 316 brushed stainless steel

**Connections:** Gel-filled butt connectors

**Mounting with Plastic Rough-In Box (included):** Flush into walls, mounts to side of wall stud

**Mounting with Optional VE-5x5:** Surface mount to walls, single gang boxes, double gang boxes, posts, or to a Viking Gooseneck pedestal.

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**\*\* Important:** Optional Braille "Push for Help" label should be adhered to the faceplate in ADA applications. Clean surface with isopropyl alcohol, peel off backing and press firmly to the front panel in location as shown.

**Note:** When European CE compliance is required, mount in optional VE-5X5 metal enclosure.

**Optional VE-5x5 Surface Mount Box with black satin powder paint finish, not included. Optional VE-LIGHT kit can be used to illuminate the faceplate when used with a VE-5x5. WARNING: Do NOT use a wet location box.**

The optional **VE-5x5** Surface Mount Box (left) is designed to be surface mounted to a single gang box, double gang box or **VE-GNP** Gooseneck Pedestal. For more information on the **VE-5x5** and **VE-GNP**.

**Important:** The **E-1600-30-IP** will **NOT** mount to a standard double gang box. If your applications requires a double gang box, see model **E-1600A-32-IP**.

**\* Note:** The black plastic rough-in box (part # 259576) may be purchased separately (Example: Mounting boxes to studs before the walls are finished for flush installation). Go to [www.vikingelectronics.com](http://www.vikingelectronics.com) and click on "Spare Parts" to order these rough-in boxes.

**\*\*\* Caution:** When warm air comes in contact with cold surfaces, such as outside walls and conduits, it causes condensation. To prevent condensation from accumulating inside the **E-1600-30-IP** always bring conduit into the bottom of the unit. If this is not possible, drill a 1/4" diameter hole in the bottom of the black plastic box.

# E-1600-50-IP / E-1600-52-IP

This is a **E-1600-IP** Emergency Phone "parts kits" without a chassis. It is specifically designed to be used behind custom elevator panels or with custom elevator phones. Just like all Viking ADA Compliant Emergency Phones, these kits provide quick and reliable handsfree communication in the event of an emergency.

**Shipping Weight:** 1.0 lb (0.45 kg)

**Connections:** Gel-filled butt connectors

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount in a metal enclosure.

## E-1600-53-IP

This is a **E-1600-IP** board (PCB) only kit. This kit can be used to convert 2008 or newer Viking 1600A Series Analog Emergency Phones to a VoIP version. A special connector and microphone assembly is required to convert 2007 and older Viking 1600A Series Emergency Phones. Contact Viking Technical Support if attempting to install this kit in these older phones. This kit can also be used to replace a damaged "IP" board in the field.

**Shipping Weight:** 1.0 lb (0.45 kg)

**Connections:** (1) RJ45 10/100 Base-T, (3) optional gel-filled butt connectors

**Note:** When European CE compliance is required, mount in a metal enclosure.

## E-1600-53-IP-EWP

This is a **E-1600-IP-EWP** board (PCB) only kit. This kit can be used to convert any Viking 1600A-EWP Series Analog Emergency Phone to a VoIP version. The kit can also be used to replace a damaged "IP" board in the field.

**Shipping Weight:** 1.0 lb (0.45 kg)

**Connections:** (1) RJ45 10/100 Base-T, (13) gel-filled butt connectors

**Note:** When European CE compliance is required, mount in a metal enclosure.

**Enhanced Weather Protection (EWP) Included:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

### Replacing Analog 1600A Series EWP Potted Circuit Boards:

<b>Step 1.</b>	Cut wires from J1 (10 pin connector) and J2 (3 pin connector).
<b>Step 2.</b>	Remove the two #6 phillips screws fastening the circuit board.
<b>Step 3.</b>	Cut off any stripped wire ends from the replacement cable.
<b>Step 4.</b>	Using the supplied gel-filled butt connectors, connect corresponding wires from replacement cable to the previously cut wires from the LED, Help/Call switch, optional Info switch, Speaker and Microphone. See <b>FIGURE 1</b> for wire color and polarity.

**\* Note:** These two red wires are only used on units with an Info button. When installing on a single button unit, cut off these two red wires and discard.

**FIGURE 1**

## E-1600-55-IP

The **E-1600-55-IP** is a universal emergency phone kit for installing behind elevator panels, or an installation requiring a custom panel. The finished panel should provide: (4) studs (#6 diameter minimum) for mounting plate, audio holes for speaker and microphone, a momentary SPST push button switch and a 0.25" diameter mounting hole for the LED. Alternatively, the LED can be cut off and the wires connected to a integral switch with LED (often found in elevators).

**Optional Enhanced Weather Protection (EWP) Available:** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Shipping Weight:** 1.6 lbs (0.73 kg)

**Connections:** (1) RJ45 10/100 Base-T, (5) gel-filled butt connectors

**Material:** 16 gauge zinc plated steel

**Note:** When European CE compliance is required, mount in a metal enclosure.

**Note:** If you do not want to use the LED, tuck it inside the unit. **Do NOT** cut it off.

## E-1600-912-IP

**Dimensions:** 11.225" x 7.08" x 2.0" (299mm x 216mm x 51mm)

**Shipping Weight:** 2.3 lbs (1.04 kg)

**Mounting:** Mounts to Viking Model VE-9X12(R/Y/B)-0P

**Material:** brushed Marine grade 316 stainless steel

**Connections:** (1) RJ45 10/100 Base-T, color-coded wires with gel-filled butt connectors

**Optional Enhanced Weather Protection (EWP):** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount onto a metal enclosure.

### A. Installing the E-1600-912-IP into the VE-9x12(R/Y/B)-0P (Not Included)

<b>Step 1</b>	Mount the <b>VE-9x12(R/Y/B)-0P</b> to the wall or desired surface.
<b>Step 2</b>	Run the conduit and wiring as appropriate.
<b>Step 3</b>	Attach Standoffs to VE-9X12 using (4) included 5/8 inch 8-32 M/F Standoffs then attach <b>E-1600-912-IP</b> to VE-9X12 using (4) included 8-32 x 3/8 Pan Head Hex Drive Screws.

### B. Optional VE-SPG Door Return Hinge Spring

### C. Adhering the "Telephone" Label on the VE-9x12(R/Y/B)-0P

<b>Step 1</b>	Clean the recessed area on the door cover with isopropol alcohol.
<b>Step 2</b>	Make sure the outside edges of the "Telephone" label are not warped upward (re-form if necessary). Remove backing paper, then firmly press label in recessed area on the front cover.

**NOTE:** Optional 261529 Red "Emergency Label", <https://store.vikingelectronics.com/>

## E-1600-GT-IP-EWP

**Dimensions:** 10.0" x 12.0" x 2.0" (254mm x 305mm x 51mm)

**Shipping Weight:** 6.4 lbs (2.9 kg)

**Mounting:** Flush mount to GAI-TRONICS towers, wall mounts, boxes and pedestals

**Material:** 14 gauge brushed Marine grade 316 stainless steel

**Connections:** (1) RJ45 10/100 Base-T, color-coded wires with gel-filled butt connectors

**Enhanced Weather Protection (EWP):** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount onto a metal enclosure..

## E-1600-RT-IPEWP

**Dimensions:** 8.281" x 11.938" x 2.0" (210 mm x 303mm x 51mm)

**Shipping Weight:** 3.1 lbs (1.41 kg)

**Mounting:** Flush mount to RAMTEL PLC Columns, towers, wall mounts, 926 and 906 boxes and pedestals

**Material:** 14 gauge brushed Marine grade 316 stainless steel

**Connections:** (1) RJ45 10/100 Base-T, color-coded wires with gel-filled butt connectors

**Enhanced Weather Protection (EWP):** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount onto a metal enclosure.

## E-1600-RTMPEWP

**Dimensions:** 6.500" x 8.500" x 2.0" (165 mm x 216mm x 51mm)

**Shipping Weight:** 2.0 lbs (0.91 kg)

**Mounting:** Flush mount to RAMTEL MINI Columns, towers, wall mounts, 924 and 904 boxes and pedestals

**Material:** 14 gauge brushed Marine grade 316 stainless steel

**Connections:** (1) RJ45 10/100 Base-T, color-coded wires with gel-filled butt connectors

**Enhanced Weather Protection (EWP):** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount onto a metal enclosure.

## E-1600-TP-IP-EWP / E-1600-TP2-IP-EWP

**Dimensions:** 9.5" x 11.75" x 2.0" (241mm x 299mm x 51mm)

**Shipping Weight:** 6.4 lbs (2.9 kg)

**Mounting:** Flush mount to Talk-A-Phone ETP towers, wall mounts, boxes and pedestals

**Material:** 14 gauge brushed Marine grade 316 stainless steel

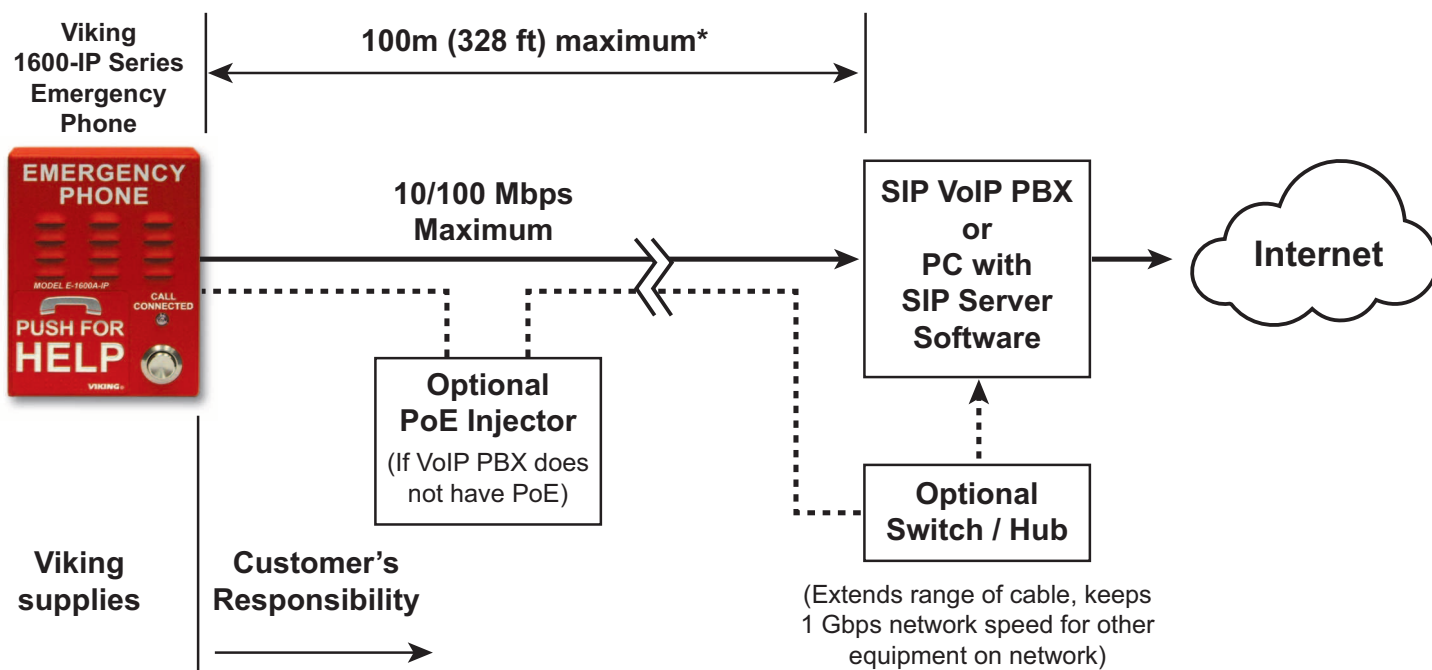

**Connections:** (1) RJ45 10/100 Base-T, color-coded wires with gel-filled butt connectors

**Enhanced Weather Protection (EWP):** EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming. For more information on EWP, go to [www.vikingelectronics.com/ewp](http://www.vikingelectronics.com/ewp)

**Note:** When European CE compliance is required, mount onto a metal enclosure.

## Typical Installation on SIP Based VoIP Phone System

**\* Note:** A PoE extender can be used for an additional 100 meters per extender. For longer runs (up to 2 km / 1.2 miles) a ethernet to fiber media converter can be used.

## PC Requirements

- **IBM** compatible personal computer with: Windows 7, 8, 10, or 11
- Adobe Acrobat Reader 8 or higher
- **1600-IP Series** hardware
- Available LAN with PoE (class 1, < 4 watts)
- Ethernet cable ( CAT5 min.)
- 1 MB minimum free hard drive space for installation
- 16MB of free physical RAM

## PC Programming

### Download and install the programming software

1. Go to [www.vikingelectronics.com](http://www.vikingelectronics.com) and enter **E-1600-IP** in the search box
2. Click **E-1600-IP** in the search results
3. Scroll down the page to Downloads, click **IP Programming Software**
4. Install the programming software by saving or opening the file and then clicking on **setup Viking IP Programming.exe**
5. Follow the prompts on your screen to complete software installation
6. To start the Viking IP Programming application, click on the Viking IP Programming icon on your desk top. The Main screen will appear, allowing the user to program any **1600-IP Series** connected to that LAN.

**Note:** PC must be connected to the same LAN as the **1600-IP Series**.

## A. Connect / Disconnect

Open the “Viking IP Programming” software on the PC and the start screen shown below will appear. Any Viking IP phones that are connected to the network will appear on the list. Simply select the **1600-IP Series** on the list and click on the “Connect” button at the bottom or double click the selected phone. If the security code of the selected phone is still set to default (845464), the PC software will not require entering a security code to connect to the phone. **1600-IP Series** have a default name of “VIKING\_MK64\_Vik02”, so if many phones are connected to the same network that all have the default name, MAC addresses must be used to identify each phone.

When finished programming, click on the “Disconnect” button at the bottom. Closing the program will also automatically disconnect the unit.

## B. Manually Muting SIP/Network Failure Alarm Beeps (3 beeps repeated every 30 seconds)

With the unit connected and powered (Green LED on and Yellow LED off or blinking) it will output 3 beeps every 30 seconds and turn the Call/Call Connected LED on and off once per second indicating a SIP registration failure, failure to receive an echo reply from a pinged gateway or Ethernet connection failure. You can manually disable the beeps by pressing and holding the Call button for 5 seconds (2 beeps will then be heard) or by clicking the “Mute Alarm Until Next Failure” tab in the Viking IP programming software. The LED will continue to flash allowing you to trouble shoot the failure.

## C. Configuring the E-1600-IP Network Settings

<b>Step 1.</b>	Open the "Viking IP Programming" software on a windows PC that is connected to the same LAN as the <b>1600-IP Series</b> phone to be programmed.
<b>Step 2.</b>	The window in the upper left corner of the menu will show you each <b>1600-IP Series</b> phone that is connected to that LAN. Select the unit with the same MAC address shown on the label located on the top of the Ethernet connector on the <b>1600-IP Series</b> phone.
<b>Step 3.</b>	Click on the "connect" button. A default <b>1600-IP Series</b> phone has no username or password programmed, the security code is set to "845464" and when configured this way, you are instantly connected to the <b>1600-IP Series</b> phone. If the <b>1600-IP Series</b> phone has been programmed with a username and password, a pop up window will ask for the username followed by the password. If the unit's security code has been changed from "845464", it will then prompt for the correct security code, then click "retry".
<b>Step 4.</b>	The program will then read and display the <b>1600-IP Series</b> phone's IP and programming settings.
<b>Step 5.</b>	Click on the "IP Settings" tab.
<b>Step 6.</b>	Select the appropriate value Static IP Settings or DHCP for "Set Unit IP Address via". Note: changing the IP address will cause you to have to reconnect to the unit. Enter the values for the fields in "if DHCP fails" or "Static IP Settings" as needed.
<b>Step 7.</b>	Set the "Unit Name", "Logging / Time Server Settings" as needed.
<b>Step 8.</b>	Select Peer-Peer in the "SIP Server / Peer to Peer Settings" to use the unit in Peer to Peer mode. Select Server to register with a SIP registrar server and fill in the "Outbnd Proxy" (SIP Outbound Proxy Server Address, "ip:port"), "Authentic. ID" (SIP Authentication ID), "Username" (SIP Username, <string>), "Password" (SIP Password), and "Caller ID" (SIP Caller ID) with values from your VoIP provider.

### Example 1: On-Premise SIP Phone System (Panasonic TDE 100/200)

SIP Server / Peer to Peer Settings	
Server	192.168.0.101
Outbnd Proxy	
Authentic. ID	
Username	117
Password	9140
Caller ID	Door 1
Register Fails	Re-Resolve

### Example 2: Cloud Based Service Provider (Voip.ms)

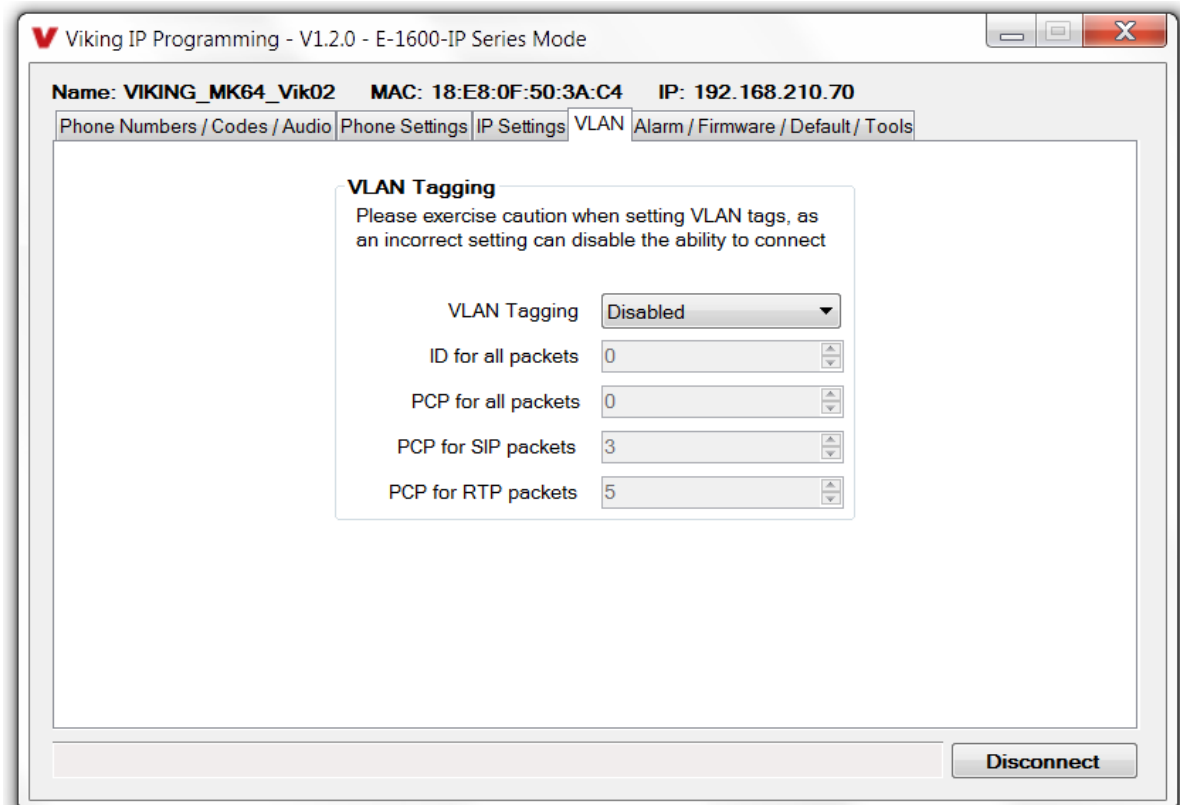

SIP Server / Peer to Peer Settings	
Server	chicago4.voip.ms
Outbnd Proxy	
Authentic. ID	
Username	190106
Password	Bear987654!
Caller ID	Door 1
Register Fails	Re-Resolve

### Example 3: Cloud Based Service Provider requiring Outbound Proxy and Authentication ID (Ring Central)

SIP Server / Peer to Peer Settings	
Server	sip.ringcentral.com:5060
Outbnd Proxy	sip20.ringcentral.com:5090
Authentic. ID	16572241020
Username	17159644561
Password	5j8QA28Lp
Caller ID	Door 1
Register Fails	Re-Resolve

## D. Configuring E-1600-IP VLAN Settings

<b>Step 1.</b>	Click on the "VLAN" tab
<b>Step 2.</b>	Disable or enable VLAN tagging by setting the value of "VLAN Tagging".
<b>Step 3.</b>	Set the VLAN tag ID by selecting an integer (1 to 4094) in "ID for all packets".
<b>Step 4.</b>	Set the Priority Code Point (PCP) value for all not SIP and RTP packets in the "PCP for all packets" input (0 is default, priorities are from low to high: 0, 1, 2, 3, 4, 5, 6, 7). Set the "PCP for SIP packets" (3 is default). Set the "PCP for RTP packets" (5 is default).

## E. Manually Resetting the Security Code to Enter Programming

<b>Step 1.</b>	Power down the <b>1600-IP Series</b> phone by disconnecting the LAN Cable (RJ45 plug).
<b>Step 2.</b>	Press and hold the Call button, then reconnect the LAN Cable (RJ45 plug).
<b>Step 3.</b>	Continue to hold Call button until you hear 2 beeps, (approximately 12 seconds). Then release the button. The LED will remain ON for the first 8 seconds, flash slowly for 4 seconds then fast flash (after 2 beeps), indicating when to release button.
<b>Step 4.</b>	The security code is now reset to <b>845464</b> (factory default).
<b>Step 5.</b>	You can now enter programming by following the steps in section <b>A</b> .

## F. Manually Resetting All Parameters to Factory Default (IP and phone settings back to default. Phone numbers, paging sources and audio files erased.)

<b>Step 1.</b>	Power down the <b>1600-IP Series</b> phone by disconnecting the LAN Cable (RJ45 plug).
<b>Step 2.</b>	Press and hold the Call button, then reconnect the LAN Cable (RJ45 plug).
<b>Step 3.</b>	Continue to hold the Call button until you hear 2 beeps, (approximately 12 seconds). Continue to hold Call button until you hear 4 more beeps, approximately 6 seconds later, then release the button. The LED will remain ON for the first 8 seconds, flash slowly for 4 seconds (2 beeps), fast flash for 6 seconds (4 beeps), then light steady indicating when to release button.
<b>Step 4.</b>	You can now enter programming by following the steps in section <b>A</b> .

## Programming Features Index

DESCRIPTION	Section	Page
Connect/Disconnect	A	23
VLAN Settings	D	27
Unit Name	1	27
SIP Server	2	27
Peer to Peer Settings	3	27
Outbound Proxy	4	27
Authentication ID	5	27
Register Fails	6	27
Pre Page Alert Tone	7	28
Multicast Page Type	8	28
SIP Page / Call Priority VS Multicast	9	29
Multicast Paging	10	30
Multicast Paging Volume (0 - 19, factory set to 1)	11	30
Speed Dial Numbers	12	31
Security code (factory set to 845464)	13	31
ID Number	14	31
Access Code (1 - 6 digits, blank = disabled, factory set to 123456)	15	31
Audio File	16	32
Recording Emergency Announcement from a phone	17	32
Internal / External Relay (factory set to Internal)	18	32
Relay Mode (Door Strike, Outbound Call, Inbound / Outbound Call, Doorbell, LV-1K Control, Ring, Ring Flash, factory set to Outbound Call)	19	33
Relay Activation Command (1 or 2 digits, factory set to **) <b>NOTE: Relay Mode must be set to Door Strike</b>	20	33
Relay Activation Time (0.5 - 99 sec, factory set to 5 sec)	21	33
Relay Buzz Volume (1 - 3 or Disabled, factory set to 2)	22	33
Relay Latch Commands (Enabled or Disabled, factory set to Enabled) <b>NOTE: Relay Mode must be set to Door Strike</b>	23	33
Alternating Switch Action (factory set to Enabled)	24	34
Speaker Mode (ON, OFF / Silent Monitor or OFF until Answered, factory set to ON)	25	34
Speaker Volume (0 - 19, factory set to 7)	26	34
Ring Volume (0 - 19, factory set to 5)	27	34
Microphone Volume ( Auto, 1 - 9, factory set to 5)	28	34
Talk/Listen Delay (VOX) (0.1 - 0.9 seconds, factory set to 0.5 seconds)	29	34
In-Band Audio Call Progress (Enabled, Disabled, factory set to Enabled)	30	34
In-Band Audio Detect Sensitivity (1 - 9, 1 = minimum, 9 = maximum, factory set to 5, power cycle unit after setting)	31	34
Repeat Announcement Option (factory set to 1)	32	34
Lap Counter ( 1 - 9 or Disabled, factory set to Disabled)	33	35
SIP Call Length Time Out (disabled or 1 - 9 minutes, factory set to 3 minutes)	34	35
Multicast Page Length Time Out ( 1 - 255 seconds, factory set to 180 seconds)	35	35
Inbound Call Mode (Disabled, Auto Answer, Auto Answer-Secure, Ring, Ring with AGC, Factory set to Auto Answer)	36	36
Ring Cadence (factory set to Normal Ring, 2 seconds on 4 seconds off)	37	36
Dial Next Number on RNA (Ring No Answer) (disabled, 1 - 9 = number of rings, factory set to 7)	38	36
Dial Next Number on Busy (disabled or enabled, factory set to enabled)	39	36
Send ID Numbers as (RFC 2833 or In Band DTMF, factory set to RFC 2833)	40	36
Call LED Mode (OFF, Entry Phone, Emergency Phone or Emergency Outbound only, factory set to Emergency Phone)	41	36
Call LED Control (Automatic or enter * to light, factory set to Automatic)	42	36
Mute Current / Next Alarm	43	37
Permanent Alarm Mute (factory set to Alarm Tones Enabled)	44	37
Programming a Username and Password to Restrict Access to Programming	45	37

Clear IP Settings	50	37
Diagnostics (used to check mic, speaker and relay operations)	51	37
Resetting Username and Password	52	37

## Programming Features

### 1. Unit Name

Up to a 31 character unit name can be assigned to the **1600-IP Series** Phone being programmed.

### 2. SIP Server

Enter the IP address or URL of your SIP server or service provider in this field. The SIP server IP address is limited to 74 characters. **Note:** *If an alternate SIP server IP address is programmed, the IP address for the SIP server and alternate SIP server will be limited to 31 characters.* **Note:** *If outbound proxy is not required, enter the SIP server IP address into the Outbnd Proxy field.*

### 3. Peer to Peer Settings

When set to Peer to Peer mode, a SIP server is not used. The unit should be programmed with a Static IP Address and Username, a password is not used. Caller ID can be programmed if needed. Simply call the unit by entering the programmed "username@192.168...(Static IP address for the unit)". The static IP address is normally programmed into a page button on the VoIP telephones. peer to Peer will only work when both devices are on the sam LAN. An IPV4 address is used in the dialing string, and must be reachable for the **1600-IP Series** Phone.

### 4. Outbound Proxy

If your SIP provider requires an outbound proxy IP address enter it in the Outbnd Proxy field. If outbound proxy is not required enter the SIP sever IP address into the Outbnd Proxy field. **NOTE:** *If not required, this field must match your SIP server IP address.*

### 5. Authentication ID

If your SIP provider requires Authentication ID, enter it in the Authentic. ID field. If Authentication ID is not required, leave this field blank.

### 6. Register Fails (Re-Resolve or Alternate Server)

When registered to a SIP server in the event that registration is lost you can program the unit to re-resolve using the current SIP server IP address or route pages through an alternate SIP server. With Alternate Server selected enter the IP address of the alternate SIP server in the field next to the Register Fails drop down box. Add an Alternate Proxy address as well if Proxy is used. When Registration Fails is set to Re-Resolve or Alternate Server, the unit will reboot after two Minutes and Fifty seconds of SIP / Network Alarm. Alternate Server mode alternates between primary and alternate servers each reboot. **Note:** *With an alternate SIP server IP address programmed, the IP address for the SIP server and alternate SIP server will be limited to 31 characters.*

Standard

Viking IP Programming - V1.4.0 - E-1600-IP(PG) Series Mode

Name: E16PG    MAC: 18:E8:0F:50:55:4A    IP: 192.168.210.242

Paging   Phone Numbers / Codes / Audio   Phone Settings   IP Settings   VLAN   Alarm / Firmware / Info / Tools

## 9. SIP Page / Call Priority vs Multicast

Incoming and outgoing non-emergency SIP call audio streams can be programmed to have priority over any of the 10 standard multicast paging groups. Use the “SIP In Above” and “SIP Out Above” drop down menus to select which multicast groups you want SIP calls to have priority over. “SIP In Above” is to set the priority of incoming SIP pages and “SIP Out Above” is to set the priority of outgoing non-emergency SIP calls. Regardless of the priorities selected, outgoing SIP emergency calls have the highest priority and will interrupt any multicast source.

**Factory Setting for both:** 0 (SIP is highest priority)

When Polycom is selected as the Multicast Page Type, the “SIP In Above” and “SIP Out Above” priorities can be set to “Poly” or “None”. See the following tables for the order of priorities with each setting. As shown, outgoing SIP emergency calls have the highest priority and Polycom Group 25 multicast has the second highest priority. The priority options allow you to determine the priorities for Polycom Groups 1 through 24 multicast signals, SIP paging and non-emergency outbound SIP calls. **Factory Setting for both:** Poly

Paging Priorities (SIP In Above and SIP Out Above both set to “Poly”)	Paging Priorities (SIP In Above and SIP Out Above both set to “None”)
Emergency Outbound SIP Calls	Emergency Outbound SIP Calls
Polycom Group 25	Polycom Group 25
Non-emergency Outbound SIP Calls and SIP paging	Polycom Groups 1-24
Polycom Groups 1-24	Non-emergency Outbound SIP Calls and SIP paging
Line In Audio Source	Line In Audio Source

Paging Priorities (SIP In Above set to “None” and SIP Out Above set to “Poly”)	Paging Priorities (SIP In Above set to “Poly” and SIP Out Above set to “None”)
Emergency Outbound SIP Calls	Emergency Outbound SIP Calls
Polycom Group 25	Polycom Group 25
Non-emergency Outbound SIP Calls	SIP Paging
Polycom Groups 1-24	Polycom Groups 1-24
SIP Paging	Non-emergency Outbound SIP Calls
Line In Audio Source	Line In Audio Source

## 10. Standard or Polycom Multicast Paging

### Standard

When using standard Multicast Paging, up to 10 multicast paging groups can be programmed into each **1600-IP** phone. Each multicast group is defined by a multicast address and port number. Each multicast group is assigned a priority, allowing simultaneously arriving pages to be serviced based on importance. A timeout check box can be selected for each paging group. See Multicast Page Length Time Out under Speaker Settings to adjust the timeout from 1 - 255 seconds. Only one timeout time can be programmed for all groups. The volume for each multicast group can be programmed separately.

### Assigning Priority to standard Multicast Paging

The **1600-IP** will prioritize simultaneous audio streams according to their priority in the Paging Sources list. Group 0 will have the highest priority while group 9 will have the lowest priority. Group 9 is useful for a low priority stream such as background music. Group 0 is useful for high priority streams such as emergency messages.

The multicast paging groups can also be used for up to ten different paging zones for receiving audio streams. A paging zone can consist of one or many **1600-IP** multicast phones. There is no limit to how many speakers can be in a given paging zone. Each multicast group is defined by a multicast address and port number. Each multicast group is assigned a priority, allowing simultaneously arriving pages to be serviced based on importance.

### Polycom

Polycom IP phones send multicast audio to a specific IP address and port. A total of 25 groups can be used, with group 25 generally reserved for an emergency broadcast. Set the Multicast Page Type to "Polycom". The Viking IP programming page will then show "Polycom Paging Source and Group Subscriptions". Polycom phones will default to IP address 224.0.1.116 and port 5001 for multicast. Under "Polycom Paging Source and Group Subscriptions", enter the IP address and port you chose in the Polycom IP phone as "Multicast IP address" and "port" (Paging/PTT Configuration page). Select the paging groups the **1600-IP** should subscribe to. Any multicast audio sent to the correct IP address, port number and a subscribed group will be heard from both the Speaker and Line Out terminals. Group 1 is the lowest priority and group 25 is the highest. The Volume and Timeout can be selected globally, although the timeout does not affect group 25. **Factory Setting:** all Groups selected

## 11. Multicast Paging Volume

The volume of each individual standard multicast page can be adjusted from 0 - 19. When polycom paging is used, the paging volume is set globally for all 25 groups. **Factory Setting:** 1

Viking IP Programming - V1.2.0 - E-1600-IP Series Mode

Name: VIKING\_MK64\_Vik02    MAC: 18:E8:0F:50:3A:C4    IP: 192.168.210.70

Fifth

**Not Available**  
These numbers are dialed in sequence after pressing the "Info" button on the unit (if present).

First   
Second   
Third   
Fourth   
Fifth

**Phone Codes**

Security Code (6 digits)   
ID Number (0-6 digits)   
Access Code (0-6 digits)

**Audio File**

Loaded Audio File Name   
Upload Wav File (8KHz, Mono, 8 or 16-bit PCM)   
Erase Uploaded Audio

**Note:** A majority of the features below can also be Touch Tone (In-Band DTMF) programmed, see DOD 949.

## 12. Speed Dial Phone Numbers

**Note:** Up to 90 digits can be stored in each of the 5 speed dial phone number positions.

The number programmed in the first location under "Speed Dial Numbers" is the telephone or extension number that is dialed when the call button is pressed. Additional numbers (if programmed) will be dialed when there is no answer and the Dial Next No. on Ring No Answer feature is enabled. The **1600-IP Series** Phone will also detect busy and move on (Dial Next Number on Busy Enabled). The **1600-IP Series** Phone will cycle through the programmed Speed Dial numbers until answered.

## 13. Security Code

The security code allows the user/installer to program the **1600-IP Series** Phone. It is recommended that the factory set security code be changed. **Factory Setting:** 845464

**Note:** The security code must be 6 digits and cannot include a \* or a #.

## 14. ID Number:

The ID Number (1 - 6 digits) is used by emergency personnel to identify the location of the caller and is given out when the receiving party presses a \*. This ID number is transmitted as In-Band DTMF. This can be cleared out by leaving the field blank. **Factory Setting:** 987654

## 15. Access Code

The Access Code is used for remotely operating the relay (Doorstrike, Mag-Lock, etc) by calling into the unit. This code provides basic security and only allows operation of the relays and not the ability to change any of the programming parameters. Once entered, any of the "Remote Access Operation Commands" can be used. The code can be 1 - 6 digits in length and cannot contain a "\*" or "#" or match the numbers used for the security code. Simply call the **1600-IP Series** Phone (set to auto-answer/auto-answer secure), the unit will automatically answer the line and output one beep. You then enter the programmed 1 - 6 digit access code, 2 beeps should be heard. You can now enter any "Remote Access Operation Commands" (see page 39). This code will also enable audio to/from the speaker and the caller. The access code can be cleared (by leaving the field blank) if this additional level of security is not required. **Factory Setting:** 123456

## 16. Audio File (optional)

The **1600-IP Series** Emergency Announcement can be uploaded with any user edited WAV file. See “WAV File Guidelines” below. Alternatively the announcement can be recorded via a telephone call (See section 17 below).

### WAV File Guidelines:

1.	The WAV file should be 8 or 16 bit PCM mono or stereo.
2.	Sampling rates of 8k,16k or 32kHz are acceptable.
3.	The WAV file may be stereo or multi-channel, but only the Left Channel will be loaded.
4.	When saved, wave files will be converted to 8KHz, mono, 16 bit, PCM.
5.	The internal flash memory can hold up to 28 seconds of recorded audio.

**Note:** Applications such as Sound Forge, Audacity, and Windows Sound Recorder can be used to create the WAV files.

## 17. Recording Emergency Announcement from a Phone

<b>Step 1.</b>	Call into the 1600-IP Series with a Touch Tone phone and access programming by entering the security code (845464 is the factory default).
<b>Step 2.</b>	Enter *4, wait for the tone and then begin recording (28 seconds of record time is available).
<b>Step 3.</b>	Enter # to stop the recording. Playback (for reviewing) is automatic.
<b>Step 4.</b>	Enter *5 to review the announcement again.
<b>Step 5.</b>	If you choose to not use a voice announcement, enter *3 to clear the recording.

**Example:** “Hudson Elementary School, classroom number 216 needs assistance. Press the star (\*) key on your telephone to hear this announcement again.”

Ring Volume: 5 Dial Next Number on Busy: Enabled

Microphone Volume: 5 Send ID Number as: RFC 2833

Talk / Listen Delay (VOX): .5 sec LED Mode: Emergency Phone

"Call" LED Control: Automatic

Apply Disconnect

## 18. Relay Internal / External

With the relay set to “Internal” the **E-1600-IP Series** Phone will activate its on board relay for door strike / gate control. The Relay should be set to “External” for higher security installations when using a Viking remote model **RC-4A** relay controller to activate the door strike / gate controller. **Factory Setting:** Internal

## 19. Relay Mode

**Door Strike Mode.** When programmed for Door Strike Mode the relay will momentarily activate for the preprogrammed relay activation time after detecting the correct relay activation command (one or two digit touch tone) from the called party.

**Outbound Call Mode.** When programmed for Outbound Call Mode the relay will activate continuously for the duration of any outbound call from the Emergency/Entry phone. This mode is useful for activating strobe lights for Emergency VoIP phones.

**Phone / Paging Mode.** When programmed for Phone / Paging Mode the relay will activate continuously for the duration of any SIP or multicast page or any inbound or outbound call to or from the Emergency/Entry phone. This mode is useful for turning on IR flood lights, VoIP phones with cameras, etc.

**Doorbell Mode.** When programmed for Doorbell Mode the relay will momentarily activate the relay for the preprogrammed relay activation time on any outbound call from the Emergency / Entry phone. This mode is useful for activating a door chime, etc. When activating door chimes, a 0.5 - 1 second relay activation time is recommended.

**Alarm Mode.** When programmed for Alarm Mode the relay will activate continuously while the Emergency / Entry phone is powered and registered to the SIP server. In the event the unit loses power and/or SIP registration the relay will turn off. The relay can be used to activate the **LV-1K**'s flashing LED and audible beep signals.

**Ring Mode.** When programmed for Ring Mode the relay will continuously activate while the ringing extension is called. This mode is useful for activating a Viking model **SL-2** strobe light, etc.

**Ring Flash Mode.** When programmed for Ring Flash Mode the relay will momentarily turn on and off in a 400ms on/off cadence while the ringing extension is called. This mode is useful for activating a Viking **LPL-1** Remote Visual Indicator, etc.

**Factory Setting:** Outbound Call

## 20. Relay Activation Command

The one or two digit code stored in the Relay Activation Command is the touch tone command that the person being called must enter on their phone in order to momentarily activate the relay to control a doorstrike, mag-lock, gate controller, or other device. The code can contain the characters 0 - 9, # or \*. The code cannot match a relay latching command (\*1, \*0). The code must be entered while the remote phone is communicating with the Speaker phone.

**Factory Setting:** \*\*

## 21. Relay Activation Time

The value stored in the Relay Activation Time is the amount of time the relay will be energized after a correct momentary touch tone command is entered. This number can range from 0.5 - 99 seconds. This also affects timing in Doorbell Mode. **Factory Setting:** 5 seconds

## 22. Relay Buzz Volume

The relay activation tone is a buzzing sound that is heard from the speaker when the door strike relay is activated. After the called party enters the correct relay activation command, the called party will hear 2 short confirmation beeps and the entry phone will output a buzzing sound (relay activation tone) while the door strike relay is activated. The tone (buzz) length will match the relay activation time up to a maximum of 5 seconds. The tone (buzz) can be programmed to three different volume settings 1 = Low, 2 = Medium, 3 = High or it can be disabled. **Factory Setting:** 2

## 23. Relay Latch Commands

When set to "Enabled" the Remote Access Operation Commands (\*0 to \*1) to Un-Latch or Latch the relay are enabled. These can be entered on a Inbound call after the access code is dialed (if programmed).

When set to "Disabled" the Remote Access Operation Commands (\*0 to \*1) to Un-Latch or Latch the relay are disabled. Disabling the Latch commands can be useful in applications where you want to eliminate the possibility of inadvertently entering a latch command leaving a gate open/closed, etc. **Factory Setting:** Enabled

## 24. Alternating Switch Action (Panic Button Mode)

With Alternate Switch Action Enabled the CALL button alternately connects and disconnects calls. With Alternate Switch Action Disabled the CALL button connects calls only. Pressing the button again after the call has been initiated will not terminate the call. **Factory Setting:** Enabled

## 25. Speaker Mode

The Speaker Mode can be set to one of the following three modes. **Factory Setting:** ON

**OFF/Silent Monitoring Mode:** In the “OFF” mode the speaker is disabled at all times. However, the speaker can be enabled after communication has been established by entering touch tone command “9#”. The speaker will remain on for the duration of the call.

**ON (factory setting):** In the “ON” mode the speaker is enabled during In-bound and Out-bound calls.

**OFF Until Answered:** In the “OFF Until Answered” mode the speaker will remain silent during dialing and will not turn on until the called party has answered.

## 26. Speaker Volume

The Speaker volume can be set from 0 - 19. 0 = lowest volume setting, 19= highest volume setting. Adjusting this will set the Speaker volume level for SIP Paging and incoming/outgoing phone calls. This setting does not affect multicast volume settings. **Factory Setting:** 7

The Speaker volume can alternatively be set to Auto 0 – 10, 15 or 19. 0 = the lowest automatic volume setting and 10, 15 or 19 = the highest automatic volume setting. With volume set to auto the **1600-IP Series Phone** will use its built-in microphone to monitor background room noise and automatically increase or decrease the Speaker and Line Out volume for SIP paging, incoming/outgoing phone calls and Multicast paging. **Note:** *The minimum volume setting for multicast paging is set separately per multicast IP address and port. See “Paging” menu in Viking IP Programming.*

## 27. Ring Volume

When set to Ring or Ring with AGC, The **1600-IP Series Phone** will output a loud ring when it is called. The level can be adjusted from 0 - 19. **Factory Setting:** 5

## 28. Microphone Volume / Automatic Noise Cancelling Mode

The microphone volume can be set from 1 to 9, 1 = lowest volume setting, 9 = highest volume setting. Alternatively the microphone can be placed in the “Auto” Automatic Noise Cancelling mode. With the mic in the Auto mode, when background noise increases, the mic gain will automatically decrease. When background noise decreases the mic gain will automatically increase. The Auto mode is useful in applications where the background noise level can change drastically. **Factory Setting:** 5

## 29. Talk / Listen Delay (VOX)

This feature selects switching time between talk and listen modes (VOX switching time). The Talk/Listen Delay can be programmed from 0.1 - 0.9 seconds. **Factory Setting:** 0.5 seconds

## 30. In-Band Audio Call Progress

The In-Band Audio Call Progress Detection can be set to enabled or disabled. In-Band Audio Call Progress detection should be enabled in applications where you are making an outbound call through your VoIP phone system and are relying on In-Band analog audio for ringback or busy detection. **Factory Setting:** Enabled.

## 31. In-Band Audio Detect Sensitivity

The In-Band Audio Detection level (Sensitivity) can be set from 1 - 9, 1 = minimum setting, 9 = highest setting. Increasing or decreasing the sensitivity may be required in applications where you are making an outbound call through your VoIP phone system and are relying on In-Band analog audio detection. **Factory Setting:** 5

## 32. Repeat Announcement Option

The **1600-IP Series Phone** can be programmed to play the announcement from 1 - 9 times, or to continuously repeat the announcement every 6 seconds until a Touch Tone \* is detected from the distant party. The call connected LED will turn on automatically after the announcement has stopped repeating. **Factory Setting:** 1 (play the announcement 1 time)

### 33. Lap Counter

With the lap counter disabled, if the **E-1600-IP Series** Phone is programmed to dial the next number on ring-no-answer and/or busy signal, the **E-1600-IP Series** Phone will continuously call its programmed phone numbers forever until the call is answered.

The lap counter is a programmable counter that determines how many times the **E-1600-IP Series** Phone will cycle through its list of up to 5 Speed Dial phone numbers, before it stops the dialing process and hangs up. When all of the programmed phone numbers have been dialed, the lap counter is incremented and the dialing process repeats. When the lap counter has been met, the dialing process stops and the **E-1600-IP Series** Phone hangs up.  
**Factory Setting:** Disabled

### 34. SIP Call Length Timeout

This feature selects the maximum length of time that calls can be connected. Programmable in increments of 1 minute up to a maximum of 9 minutes or disabled. With the call length disabled, the **1600-IP Series** Phone must rely on a call ended signal, busy signal, Ring No Answer limit, or touch tone # to hang-up. **Factory Setting:** 3 minutes

### 35. Multicast Page Length Time Out

The Multicast Page Length Timeout can be programmed from 1 - 255 seconds in one second increments. The Time Out can be disabled, allowing any length of page or continuous background music. Only one timeout time can be programmed for all multicast paging groups. When using standard Multicast Paging, a timeout checkbox can be selected for each paging group. When using Polycom Multicast Paging, the timeout checkbox enables the timeout globally on groups 1 through 24. There is no timeout for a page to the emergency group 25.  
**Factory Setting:** 180 seconds

### 36. Inbound Call Mode

The Inbound Call Mode determines how the **1600-IP Series** Phone handles incoming SIP calls. One option is to generate a loud ring sound through the speaker. The **1600-IP Series** Phone can also auto answer a SIP call to transmit a page, control the relay or listen to transmit audio from the microphone. The last option is the silent monitor mode, which allows callers to listen to the transmit audio from the microphone. The “secure” options for auto answer require the callers to dial the access code in order to transmit a page, activate the relay or activate the optional **RC-4A** relays.  
**Factory Setting:** Auto Answer

**Disabled** – Inbound SIP calls are not allowed.

**Auto Answer** – Inbound SIP calls are auto answered on the first ring. This can also be used for Silent Monitoring by changing the Speaker Mode to ‘OFF/Silent Monitor’, See page 34. For more security use the Auto Answer Secure Mode.

**Auto Answer Secure** – In the “Auto Answer - Secure” mode, the phone will automatically answer an incoming call on the first ring. The unit will then output 2 beeps but will not go into two-way voice mode. After the 2 beeps are heard, you will have 10 seconds to enter the pre-programmed 1 - 6 digit Access Code (see section 15 on page 31). When the correct code is entered, 2 beeps will be heard and the unit will enable the Two-Way Mode (mic and speaker audio). After the correct Access Code is entered, any of the “Remote Access Operation Commands” can be used (see Operation, section D on page 39). **Note:** *If the wrong Access Code is entered or more than 10 seconds have elapsed, the phone will output 3 beeps and disconnect.*

**Ring:** In the “Ring” mode the speaker phone will not automatically answer an incoming call but will output a loud ring signal out of the speaker in a 2 seconds on, 4 seconds off ring pattern. There are four available ring cadences.

**Ring with AGC:** In the “Ring with AGC” mode the speaker phone will not automatically answer an incoming call but will output a loud ring signal out of the speaker in a 2 seconds on, 4 seconds off ring pattern. The phone will automatically increase or decrease the ring volume based on background ambient noise. The call can then be answered by momentarily pressing the call button.

### 37. Ring Cadence

The Ring cadence can be programmed to one of 4 different cadences. **Factory Setting:** Normal Ring

**Normal Ring** (single ring, 2 seconds on 4 seconds off) factory setting

**Double Ring** (double ring, 1 second on 0.5 seconds off 1 second on 3.5 seconds off)

**Short-Short-Long** (triple ring, 0.5 seconds on 0.5 seconds off 0.5 seconds on 0.5 seconds off 1 second on 3 seconds off)

**Short-Long-Short** (triple ring, 0.5 seconds on 0.5 seconds off 1 second on 0.5 seconds off 0.5 seconds on 3 seconds off)

### 38. Dial Next Number on Ring No Answer

If enabled and a ring-no-answer is detected, the **1600-IP Series** Phone will dial the next programmed Speed Dial number after the programmed amount of rings. A momentary press of the call button will dial the first programmed Speed Dial number. **Factory Setting:** 7 (will redial after 7 rings)

### 39. Dial Next Number on Busy

If enabled and a busy is detected, the speaker phone will dial the next programmed Speed Dial number. A momentary press of the call button will dial the first programmed phone number. **Factory Setting:** Enabled

### 40. Send ID Number as

The I.D. number can be transmitted as RFC 2833 or as In-Band DTMF. **Factory Setting:** RFC 2833

### 41. Call LED Mode

The “Call” LED on the **E-1600-IP Series** can be programmed to one of four different modes. **Factory Setting:** Emergency Phone

**OFF Mode:** Useful for silent monitoring applications. In this mode the LED will not light during normal operation. It will only light (blink) if it cannot register with the programmed SIP server or while manually resetting all network parameters to factory default.

**Entry Phone Mode:** The LED will remain ON in the idle state, turn off while button is pressed, blink during dialing, light steady when the call is answered, then turn OFF momentarily when the call is completed.

**Emergency Phone Mode:** The LED will remain OFF in the idle state, blink during dialing, light steady when the call is connected, then turn OFF when the call is completed.

**Emergency Phone Outbound Only:** On outbound calls, the LED will remain OFF in the idle state, blink during dialing, light steady when the call is connected, then turn OFF when the call is completed. On in-bound calls, the LED will remain off. This is useful for silent monitoring on inbound calls.

### 42. “Call” LED Control

During outbound SIP calls the “CALL” LED can be programmed to light automatically when the called party has answered or only light after the called party has entered a touch tone “\*”. **Factory Setting:** Automatic

Viking IP Programming - V1.2.0 - E-1600-IP Series Mode

Name: VIKING\_MK64\_Vik02 MAC: 18:E8:0F:50:3A:C4 IP: 192.168.210.70

**Default Unit Settings**

Clear Phone Settings Clear IP Settings

**Diagnostics**

Test Relay Activation Read Relay Status

Last Read Relay Status

Test Mic / Speaker Result

Disconnect

### 43. Mute Current / Next Alarm

A network failure alarm will be indicated by providing 3 beeps every 30 seconds. A network failure indicates the unit is not registered to the SIP server or there is a communication failure with the gateway. The three beeps can be muted by clicking on “Mute Current / Next Alarm”. The Status LED will continue to flash to assist troubleshooting. The alarm beeps can also be permanently disabled. See Permanent Alarm Mute.

### 44. Permanent Alarm Mute

Selecting “Alarm Tones Disabled” will mute all alarm tones indefinitely. To re-enable alarm tones select “Alarm Tones Enabled”. **Factory Setting:** Alarm Tones Enabled

### 45. Programming a Username and Password to Restrict Access to Programming

To increase security, a username and password can be programmed to limit access to the **1600-IP Series Phone** using Viking IP Programming software. When no username and password are programmed and the security code is still set to default (845464), the PC software will not require a username, password or security code when connecting to the **1600-IP Series Phone**. If the **1600-IP Series Phone** has been programmed with a username and password, a pop up window will ask for the username followed by the password. If the unit’s security code has been changed from default (845464), it will then prompt for the correct security code.

If the username and password are unknown, they can only be erased by resetting all network parameters to default with the CALL button (see section F on page 25). If the username and password are known but you wish to erase them, that can be accomplished by exporting the data from the **1600-IP Series Phone**, resetting all network parameters to default with the CALL button (see section F on page 25) or clicking on “Clear IP Settings” and then importing the data back into the **1600-IP Series Phone**.

### 46. IP Firmware

If new **1600-IP Series Phone** firmware is available, after opening the programming software a pop window will come up asking you if you would like to update firmware. An alternative method of updating can be done by clicking the IP firmware “Update IP” button. You can then browse to the folder that contains the PIP file for updating the unit’s IP firmware. This method is typically only used when Viking Technical Support has sent you updated IP firmware.

### 47. Unit Firmware

If new **1600-IP Series Phone** firmware is available, after opening the programming software a pop up window will ask if you would like to update firmware. Another way to update is accomplished by clicking the Unit firmware “Update Unit” button. You can then browse to the folder that contains the HEX file for updating the unit’s firmware. This method is typically only used when Viking Technical Support has sent you updated firmware.

### 48. Import / Export

The Import / Export feature is useful for backing up all the **1600-IP Series Phone**’s programming or for importing programming when installing multiple units with a majority of the same programming.

### 49. Clear Unit Settings

Clicking on the “Clear Unit Settings” button in programming will reset all of the Programming Features back to their factory default settings. **Note:** *This command will not change or reset your IP settings.*

### 50. Clear IP Settings

Clicking on the “Clear IP Settings” will reset all of the IP settings back to their factory default settings. This also clears paging Group settings and Addresses. **Note:** *This will not effect any speaker or paging settings.*

### 51. Diagnostics

The Diagnostics section in the Viking IP Programming can be used to test the functionality of the mic, speaker and the relay. **Note:** *Using the “Test Relay Activation” button is not recommended when Relay Mode is set to LV-1K Control.*

### 52. Resetting Username and Password

Export your settings with the Export Data button. Click on Clear IP Settings. The unit will reset and reboot ( IP address may change). Connect to the unit and import the Settings file with the Import Data Button.

### A. “HELP” / “CALL” Button

When the “HELP” / “CALL” button is pressed, the **1600-IP Series** phone dials a pre-programmed telephone number. The Call Connected LED momentarily flashes during dialing. In the event the line is busy or there is a ring-no-answer, the unit can be programmed to call additional phone numbers.

The phone then cycles through up to 5 pre-programmed emergency numbers until the call is answered. When the call is answered, the digital voice announcer will automatically play to identify the location of the emergency call. The phones are factory programmed to play the announcement once, and then automatically light the “Call Connected” LED to show that handsfree communication to emergency personnel is established. The \* key will send the I.D. number (if programmed), and play the announcement again. The distant party will know the location of the emergency call by either the voice announcement or by decoding the touch tone I.D. number. Once the “Call Connected” LED is on, the # key can be used to force the phone to hang-up.

### B. “INFO” Button (E-1600-20/22/52/53-IP)

When the “INFO” button is pressed (**1600-20/22/52/53-IP** only), the phone goes off-hook and dials the first “INFO” phone number programmed. If a busy signal is detected or the call goes unanswered, the phone will cycle through all five “INFO” phone numbers until the call is answered or lap counter is met. When answered, handsfree communication is established. **Note:** *The voice announcement is for **Emergency/Help** calls only and will not play on a call initiated from the “INFO” button.*

### C. Multicast

The **1600-IP** can be set to one of two modes for multicasting, Standard or Polycom. Polycom is only used when Polycom IP phones are used. To change to Polycom multicast, go to the “Paging” tab, “More Speaker Settings” and change the “Multicast Page Type” to Polycom.

#### Standard Multicast Paging (Factory Setting)

Up to 10 multicast paging groups can be programmed into each unit and each group is assigned a priority level allowing simultaneous arriving multicast pages to be handled based on importance. Low priority groups are often used for low priority streams like background music and high priority groups are used for high priority streams such as emergency messages. Group 0 is the highest priority, and Group 9 is the lowest. A timeout limit can be set and either enabled or disabled for each multicast group. The volume of each group can be programmed and non-emergency SIP calls can be assigned either higher or lower priority than all or some of the multicast groups (see Programming section 11).

#### Polycom Multicast Paging

Polycom phones send multicast audio to a specific IP address and port. A total of 25 groups can be used and groups 1 through 24 can individually be enabled/disabled in each **1600-IP**. Group 25 is always enabled, as group 25 is generally used for emergency broadcasts. Any multicast page made from a Polycom phone (on the same LAN) to the programmed IP address, port and to an enabled group will play through the **1600-IP** speaker. The priority of Polycom sources ranges from group 1 (lowest) to group 25 (highest). Non-emergency SIP calls can be assigned either higher or lower priority than Polycom group 1 through 24 multicast paging (see the table in programming section 11 for Polycom paging priorities). Multicast page timeout can be enabled/disabled globally for groups 1 through 24 (there is no timeout for group 25) and the length of the Multicast page timeout is adjustable. The volume for Polycom multicast is set globally for all groups.

## D. Remote Access Operation Commands

The following commands can be entered after answering an inbound call from the emergency phone. The commands can also be entered on an outbound call to the emergency phone. After the emergency phone auto answers the call, two beeps will be heard. If the access code has been disabled, you can now enter the Remote Access Operation Commands below. If an Access code has been programmed, enter the Access code digits. With the correct code entered, two beeps will be heard and you can now enter the Remote Access Operation Commands below.

Feature	Tone Tone Command	Description
Activate Relay	** or __ __	Momentarily activate relay (1 or 2 digits, factory set to **).
Un-Latch Relay	*0	Un-latch* (deactivate) the relay.
Latch Relay	*1	Latch* (continuously activate) the relay.
Disconnect	#	Disconnects or forces the emergency phone to hang up.
Send ID and Play Message	*	Send I.D. number (if programmed) and plays the announcement.

\* **Note:** Latching commands must be enabled (\*6) in programming.

## Troubleshooting

If the unit cannot register with the programmed SIP server, the LED will blink on and off every two seconds, and three error beeps will be heard every 30 seconds until communication is restored. This alerts a potential user of a problem with the device that will prevent an emergency phone call from being made.

You may silence the error beeps, per instance, by pressing and holding the HELP/CALL button for 5 seconds or by clicking the “Mute Alarm Until Next Failure” button in the Viking IP Programming Software (see section **B** on page 23). The error beeps automatically re-enable once the unit is registered, to alert of any new problems that arise.

### Line Verification Panel with Key Switch

New ASME A17.1-2010 code requires that “the two-way communications means within the (elevator) car shall include a means to verify operability of the LAN connection”. When your local municipality adopts this new ASME A17.1 code the **LV-1K** can be added to fulfill all requirements for visual and audible signaling when it is determined the LAN connection is not functioning.

The **LV-1K** can be added to any new or existing Viking **1600-IP Series** elevator emergency phone as a stand alone solution. The **LV-1K** continuously monitors for loss of PoE or communication with the server and will immediately provide an audible and visual indication when the LAN connection has been accidentally cut or disconnected.

In accordance to ASME A17.1, the **LV-1K** is labeled “ELEVATOR COMMUNICATION FAILURE” in ¼” high red letters, and will sound an audible signal every 30 seconds and flash a red light when a loss of connection is detected. Authorized personnel can silence the audible signal with the included key switch. The LED will remain flashing until the fault is corrected.

For more information, see DOD 246

### Surface or Pedestal Mount Viking Products While Maintaining Weather and Vandal Resistance

The **VE-3x5**, **VE-5x5**, **VE-6x7** and **VE-5x10** add vandal and weather resistance, as well as versatility to many Viking products. The **VE-Series** backboxes are available in black fine texture powder painted steel or Marine Grade 316 stainless steel. The weather resistant boxes are designed to be surface mounted to a wall, post, single gang box, or a **VE-GNP** gooseneck pedestal. **Note: The VE-3x5 is not compatible with the VE-GNP pedestals and is not available in stainless steel.**

The **VE-3x5** is designed to be used with the **E-40-EWP** or **E-50-EWP** Series entry phones. The **VE-5x5** is designed to be used with the **E-10A-EWP**, **E-30-EWP**, **E-30-PT-EWP**, **E-60-EWP**, **E-65-EWP**, **E-70-EWP**, **E-75-EWP** entry phones, the **E-1600-20A-EWP**, **E-1600-20-IP-EWP**, **E-1600-30A-EWP** and **E-1600-30-IP-EWP** emergency phones, as well as the **W-1000-EWP** and **W-3000-EWP** handsfree doorboxes. The **VE-6x7** is designed to be used with the **K-1700-3-EWP** and **K-1705-EWP** entry phones and the **VE-5x10** is designed to be used with the **K-1900-7-EWP** and the **K-1900-8-EWP** vandal resistant phones.

The **VE-GNP** gooseneck pedestals are designed to be used with the **VE-5x5**, **VE-6x7** and **VE-5x10** backboxes and are ideal for drive up communications.

**Note: The VE-3x5 is not compatible with the VE-GNP pedestals.** The **VE-PNL**'s are **VE-Series** backboxes with a blank aluminum panel. The user can customize the clear-coated aluminum panel to mount an **PRX-1** card reader, **PRX-2** keypad or switch. The kits come complete with box, gasket, panel and screws. Model numbers that end with “SS” are stainless steel version. **Note: The use of magnets to mount the VE-Series enclosure to a metal surface can affect the operation of the enclosed product.**

## Viking Area of Refuge Signs Designed to Comply with IBC, ADA, NFPA and ICC Requirements

**ARS-TB100**

Tactile Blue Braille and raised letter sign to be placed next to the Area Of Refuge (stairwell exit) door.

**ARS-IB100**

Instructional Blue Braille and Raised letter sign to be placed next to the Area of Refuge emergency phone (E-1600A-IP, etc.)

**ARS-DLB100**

**ARS-DRB100**

Directional Blue signs with left or right arrow to be placed next to exit doors without Area Of Refuge.

- **ARS-TB100:** 6" wide x 9" tall Tactile Sign with 0.031" raised white letters and accessibility symbol, California compliant Contrated Grade 2 Braille. Blue PMS 300 Acrylic with non-glare finish, 0.032" thick double sided foam included.
- **ARS-IB100:** 6" wide x 7.5" tall Instructional sign with 0.031" raised white "Push For Help" letters and ingraved white text, California compliant Contrated Grade 2 Braille. Blue PMS 294 ABS with non-glare finish, 0.032" thick double sided foam included.
- **ARS-DLB100** (left arrow) and **ARS-DRB100** (right arrow): 12" wide x 4" tall Directional sign with ingraved white text, Blue PMS 294 ABS with non-glare finish, 0.032" thick double sided foam included.
- **VE-ARSW:** Area of Refuge surface mount command center cabinet. Lockable for mounting "Two-Way Communications System" phone in low rise (less than 60 ft tall) buildings. See **DOD 237**.

The **ARS Series** Area of Refuge Signs are designed comply with IBC 1007,1011, ADA 4.3.11, NFPA 22, 101 and ICC 703 code requirements. The Instructional, Tactile and Directional signs are made from Acrylic or durable ABS plastic and are designed to adhere to the wall with the provided double sided foam tape. **For more information, see DOD 235.**

## Emergency Phone Panic Button Kit (for use with Viking Emergency Phones)

The **PB-1** Panic Button Kit connects to a Viking **1600A** or **1600-IP Series** Emergency Phone to provide a one-way talk path to the pre-programmed number when used.

The **PB-1** will activate the **1600A** or **1600-IP Series** Emergency Phone and allows the called party to light a red LED to indicate that the call is connected. The called party will be able to hear the installation site, but the site will not be able to hear the called party. This makes it a very effective security measure, as there is no other indication that the site is being monitored.

**For more information, see DOD 233**

## Warranty

### IF YOU HAVE A PROBLEM WITH A VIKING PRODUCT, CONTACT VIKING TECHNICAL SUPPORT: 715-386-8666

Our Technical Support Department is available for assistance Monday through Friday 8:00am to 5:00pm central time. Before you call, please:

1. Know the model number, the serial number and what software version you have (see serial label).
2. Have the Product Manual in front of you.
3. It is best if you are on site.

### RETURNING PRODUCT FOR REPAIR

The following procedure is for equipment that needs repair:

1. Customer must contact Viking's Technical Support Department at 715-386-8666 to obtain a Return Authorization (RA) number. The customer MUST have a complete description of the problem, with all pertinent information regarding the defect, such as options set, conditions, symptoms, methods to duplicate problem, frequency of failure, etc.
2. Packing: Return equipment in original box or in proper packing so that damage will not occur while in transit. The original product boxes are not designed for shipping - an overpack box is required to prevent damage in transit. Static sensitive equipment such as a circuit board should be in an anti-static bag, sandwiched between foam and individually boxed. All equipment should be wrapped to avoid packing material lodging in or sticking to the equipment. Include ALL parts of the equipment. C.O.D. or freight collect shipments cannot be accepted. Ship cartons prepaid to: **VIKING ELECTRONICS  
1531 INDUSTRIAL STREET  
HUDSON, WI 54016**
3. Return shipping address: Be sure to include your return shipping address inside the box. We cannot ship to a PO Box.
4. RA number on carton: In large printing, write the RA number on the outside of each carton being returned.

### RETURNING PRODUCT FOR EXCHANGE

The following procedure is for equipment that has failed out-of-box (within 10 days of purchase):

1. Customer must contact Viking's Technical Support at 715-386-8666 to determine possible causes for the problem. The customer MUST be able to step through recommended tests for diagnosis.
2. If the Technical Support Product Specialist determines that the equipment is defective based on the customer's input and troubleshooting, a Return Authorization (RA) number will be issued. This number is valid for fourteen (14) calendar days from the date of issue.
3. After obtaining the RA number, return the approved equipment to your distributor. Please reference the RA number on the paperwork being shipped back with the unit(s), and also the outside of the shipping box. The original product boxes are not designed for shipping - an overpack box is required to prevent damage in transit. Once your distributor receives the package, they will replace the product over the counter at no charge. The distributor will then return the product to Viking using the same RA number.
4. **The distributor will NOT exchange this product without first obtaining the RA number from you. If you haven't followed the steps listed in 1, 2 and 3, be aware that you will have to pay a restocking charge.**

### TWO YEAR LIMITED WARRANTY

Viking warrants its products to be free from defects in the workmanship or materials, under normal use and service, for a period of two years from the date of purchase from any authorized Viking distributor. If at any time during the warranty period, the product is deemed defective or malfunctions, return the product to Viking Electronics, Inc., 1531 Industrial Street, Hudson, WI., 54016. Customer must contact Viking's Technical Support Department at 715-386-8666 to obtain a Return Authorization (R.A.) number.

This warranty does not cover any damage to the product due to lightning, over voltage, under age, accident, misuse, abuse, negligence or any damage caused by use of the product by the purchaser or others. This warranty does not cover non-EWP products that have been exposed to wet or corrosive environments. This warranty does not cover stainless steel surfaces that have not been properly maintained.

**NO OTHER WARRANTIES.** VIKING MAKES NO WARRANTIES RELATING TO ITS PRODUCTS OTHER THAN AS DESCRIBED ABOVE AND DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTIES OR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

**EXCLUSION OF CONSEQUENTIAL DAMAGES.** VIKING SHALL NOT, UNDER ANY CIRCUMSTANCES, BE LIABLE TO PURCHASER, OR ANY OTHER PARTY, FOR CONSEQUENTIAL, INCIDENTAL, SPECIAL OR EXEMPLARY DAMAGES ARISING OUT OF OR RELATED TO THE SALE OR USE OF THE PRODUCT SOLD HEREUNDER.

**EXCLUSIVE REMEDY AND LIMITATION OF LIABILITY.** WHETHER IN AN ACTION BASED ON CONTRACT, TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR ANY OTHER LEGAL THEORY, ANY LIABILITY OF VIKING SHALL BE LIMITED TO REPAIR OR REPLACEMENT OF THE PRODUCT, OR AT VIKING'S OPTION, REFUND OF THE PURCHASE PRICE AS THE EXCLUSIVE REMEDY AND ANY LIABILITY OF VIKING SHALL BE SO LIMITED.

IT IS EXPRESSLY UNDERSTOOD AND AGREED THAT EACH AND EVERY PROVISION OF THIS AGREEMENT WHICH PROVIDES FOR DISCLAIMER OF WARRANTIES, EXCLUSION OF CONSEQUENTIAL DAMAGES, AND EXCLUSIVE REMEDY AND LIMITATION OF LIABILITY, ARE SEVERABLE FROM ANY OTHER PROVISION AND EACH PROVISION IS A SEPARABLE AND INDEPENDENT ELEMENT OF RISK ALLOCATION AND IS INTENDED TO BE ENFORCED AS SUCH.

If trouble is experienced with the **1600-IP Series** phone, for repair or warranty information, please contact:

**Viking Electronics, Inc., 1531 Industrial Street, Hudson, WI 54016 Phone: 715-386-8666**

### WHEN PROGRAMMING EMERGENCY NUMBERS AND (OR) MAKING TEST CALLS TO EMERGENCY NUMBERS:

Remain on the line and briefly explain to the dispatcher the reason for the call. Perform such tests in off-peak hours, such as early morning or late evenings.

### PART 15 LIMITATIONS

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

### CANADA

This class A digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.
