

Divert Calls to More than One Phone Number

The RAD-AMP provides call diverting from only one location to another. By adding the new K-1900-30 Smart Dialer, calls that receive a busy or no answer can be diverted to up to 4 other numbers. The K-1900-30 can try these numbers up to 99 times. Both units can be remotely programmed. The RAD-AMP has programmable ring delay if diverting after a number of rings is required. The inbound caller will not hear the K-1900-30 dial the first phone number, but will hear the K-1900-30 dial if it needs to call additional numbers.
