

Priority to Loud Ring vs Paging

In the Viking model PA-30 amplifier, voice paging is a higher priority than loud ring, meaning loud ring is not heard while a page is in progress. Some customers want loud ring to be a higher priority than a voice page. This is easily accomplished by adding a K-600F to the PA-30, wiring the K-600F to the auxiliary input of the PA-30 and setting PA-30 dip switch 2 to off. Loud ring is now a higher priority than a voice page.
