

SPOTLIGHT: ADA Compliant Emergency Phones

The 1600A Series and 1600-IP Series are ADA Compliant Emergency Phones designed to provide quick and reliable handsfree communication. All 1600A and 1600-IP Series phones meet ADA requirements for elevator and emergency telephones. The phones can dial up to 5 programmable emergency numbers and select models feature a second "INFO" button that can dial non-emergency numbers.

These emergency phones can be programmed from any touch tone phone. The VoIP emergency phones can be programmed from a PC on the same LAN. All models can be programmed to deliver a digital announcement to identify the location of the emergency call. An optional DTMF touch tone code may also be delivered and a "Call Connected" LED can be initiated manually or automatically.

- Viking offers a large selection of colors, chassis styles, and mounting options
- Analog models are phone line powered
- VoIP models are PoE powered (class 1)
- Automatic Noise Canceling (ANC) for proper operation in noisy environments
- Complies with ASME A17.1 Elevator Code when used with a Viking LV-1K, DOD 246
- For outdoor applications, Enhanced Weather Protection (EWP) models available, designed to meet IP66 Ingress Protection Rating

EMERGENCY PHONES:

1600A SERIES (analog) see DOD 215

1600-IP SERIES (VoIP) see DOD 255

The X-1605 Series of IP Video Emergency Phones are designed to provide HD video and reliable handsfree voice communication for SIP VoIP phone systems and service providers. The built-in IP video camera has H.264 video compression, low light sensitivity, a wide viewing angle of 126 degrees, and can output dual video streams of up to 1080p resolution.

Enhanced Weather Protection (EWP)

For applications requiring an extra layer of protection against moisture, vehicle exhaust, pool chemicals or extreme temperatures, Viking's Enhanced Weather Protection gives you the durability you need for years of service. Enhanced Weather Protection (EWP) can tackle tough applications like ocean beach properties, swimming pool areas, parking garages, or anywhere a product is exposed to harsh elements.

DEFENDS Against Moisture

WEI

The circuit board and other internal components are sealed from moisture and condensation.

SURVIVES the Heat

EWP protects against soaring temperatures, humid or dry - we've got you covered.

TECH TIPS

or SCAN HERE ·

SHIELDS from Salt Air

Guards against corrosive surroundings, such as installations outside near the ocean.

ENDURES the Cold

EWP products stand up to cold weather. (We test our products in Wisconsin and we know cold weather!)

PROTECTS from Corrosion

CHLORINE

COLD

Corrosive locations such as pool areas, parking garages, or near an ocean are extremely tough on electronics. EWP protects against corrosion from salt air, exhaust, chlorine, etc.

PRODUCT PROFILES

LED Visual Indication

The BLK-4 provides high visibility indication of line status through a high powered 360° LED strobe and/or beacon visual indicator. The BLK-4 can be used to add emergency notification to pre-existing emergency phones by turning on the strobe light when the emergency phone is in use.

The included control module can be installed on any standard telephone line or analog PABX/KSU station. The strobe can also be triggered by the relay contact output of the 1600-IP series emergency phones.

The BLK-4 is designed for indoor applications. The BLK-4-EWP is equipped with Enhanced Weather Protection (EWP) for outdoor installations where the unit is exposed to precipitation or condensation.

For more information on the BLK-4 and BLK-4-EWP see DOD 654

The lens cover is available in more colors, visit our online Spare Parts store -->

TRIVIA QUESTION

What is it called when there's a second full moon in a calendar month?

Everyone who submits the correct answer by 10/31/2023 will be entered into a prize drawing.

JUL-AUG Trivia: What year was Viking Electronics started? Answer: 1969

Congratulations to JEFFO CLEVELAND from HOLOVISION!

VE-9x12 Outdoor Enclosures Added Protection for Your Viking Product!

The VE-9x12 outdoor enclosures provide the ultimate in weather protection for your Viking product or other device. The VE-9x12 enclosures are constructed of durable UV stable polycarbonate / ABS composite to provide years of outdoor service.

The heavy-duty doors are labeled "Telephone" and include a gasket seal to keep out even the harshest weather. The VE-9x12 allows you to choose from two different internal panels that allow mounting different Viking products.

For more information on the VE-9x12 Series, see DOD 413

Concentrate up to 6 Emergency Phones and Comply with ASME A17.1 Elevator Code

The LC-6 Line Concentrator eliminates the monthly charges for a dedicated line to each elevator. The LC-6 is designed to be used with the Viking 1600A Series Elevator Phones. Up to six of these emergency phones can communicate with authorized personnel on 3 other phones within a building, or add a telephone line to allow communication outside the building. A call initiated by an emergency phone can dial internally, externally, or both. Any other phones that are activated will be bridged with authorized personnel, thus fulfilling ASME A17.1 requirements.

All telephone line inbound calls are answered by the LC-6. A touch tone command will route the call to any of the phone ports. If no command is detected within 4 seconds, the call will be routed to the last emergency phone that was used. This allows emergency personnel to easily call back to the same phone.

For more information on the LC-6, see DOD 245

Line Verification Relay

The LVR-1 Line Verification Relay can be used to monitor the service on analog phone lines or extensions.

Phone lines can go out of service at any time and without any warning. You could be paying monthly fees for phone lines that are not in service and not realize it. The LVR-1 can be a real money saver. The LVR-1 Line Verification Relay monitors the voltage on an analog phone line.

For more information on the LVR-1, see DOD 506

FALL COLOR IN

THE WAIT IS ALMOST OVER! As days grow shorter and the weather cools down, Wisconsin welcomes one of the most special, scenic times of year. Wondering where you'll be able to spot color this fall? It's all up to Mother Nature!

HOW DOES FALL COLOR DEVELOP? Daylight hours and weather conditions are the two major players in fall color development. As sunlight hours wane, trees respond by producing less chlorophyll, causing a medley of yellow, brown and orange leaves to bloom across Wisconsin and beyond.

Colors, especially reds, thrive in warm days and cool (but not freezing) nights. Severe weather conditions can delay or impact the season's color – an early frost, strong winds and heavy rain are the biggest culprits.

Different species of trees produce a range of colors: you'll find oaks (red/brown), birch (bright yellow), dogwood (purple/red), poplar (golden yellow) and maple trees (orange/red/yellow) in abundance.

WHEN WILL THE LEAVES CHANGE? Fall color develops from north to south (cooler to warmer), typically starting in mid-September and going through October.

The WISCONSIN FALL COLOR REPORT i

your place to go for updates – the report breaks down the percentage

of color change by county, updated regularly from every corner of the state.

CHECK OUT THE WISCONS

WHERE CAN I SEE FALL COLOR? All over! You can find fall color in every region of Wisconsin, from the deep woods of the north to the rolling hills of the south. Some favorite scenic destinations are:

DOOR COUNTY - Bursts of color line the shores of Lake Michigan on this popular peninsula. A favorite vacation spot, Door County adopts an even more laid back, romantic feeling in the fall.

GREAT RIVER ROAD - Wind your way along the Mississippi River for a fall color show atop towering limestone bluffs.

NORTHWOODS - Immerse yourself in autumn foliage on a trip to the Northwoods, where color is just the start of fall's festivities. Take a hayride, tour a cranberry marsh and snack on caramel apples under a canopy of orange and yellow leaves.
